The landmark Paris Climate Agreement heralds a global shift to a low-carbon future to get climate change under control. Germany's pioneering energy transition provides valuable lessons on weaning a major economy off fossil fuels: The repercussions of the country's Energiewende are felt all across society and the business sector, offering journalists a wealth of exciting and important stories.

Yet researching this massive undertaking in a foreign country with a tricky language is a difficult job, even for the most seasoned reporter. This is compounded by the immense complexity of the technology and economics behind energy policy. At the same time, strong fact-based and critical journalism is essential to inform the international debate about how to decarbonise the global economy.

Which is why Clean Energy Wire (CLEW) has set out to support journalists in their work. Fully funded by two non-profit foundations – Stiftung Mercator and the European Climate

Foundation – we enjoy full independence from any business or political interests. We share our funders' commitment to work towards the decarbonisation of the economy in order to limit man-made climate change.

The CLEW "Reporter's Guide to Germany's Energy Transition", now in its fourth edition, gives journalists a starting point for their work by highlighting the main storylines of the energy transition, providing lists of experts and links to key readings. Our website [cleanenergywire.org](http://cleanenergywire.org) offers plenty more in-depth information and contacts. Our daily news digest and our Twitter feed @cleanenergywire keep readers in the loop about Energiewende debates and events. We also organise workshops for journalists, providing a first-hand view of the transformation. But most importantly, we offer support with specific questions and put you in touch with experts – so don't hesitate to ask CLEW.

*Sven Egenter and  
the Clean Energy Wire team*

# What is the Energiewende? And where did it come from?

The energy transformation, in Germany widely known as the “Energiewende”, is the country’s planned transition to a low-carbon, nuclear-free economy. So far there have been two key elements to the process:

- The phase-out of nuclear power (by 2022)
- The development of renewable energies in the power sector

However, since the first introduction of feed-in tariffs for renewable energies in the 1990s, the project has started to radically reshape the energy system as a whole. As the traditional model of centralised power generation is being replaced by diverse sources of energy that fluctuate with the weather, not only the grid and the power market are affected. While so far mainly focused on electricity, the Energiewende is now also expected to transform other sectors like industry, housing, construction, heating and transport. *For specific energy transition targets see pages 4–5.*

Already, there are winners and losers: Big utilities’ traditional business models have been hit hard while consumers and some businesses are concerned about higher electricity costs. The coal industry first benefitted from the nuclear phase-out, but its future is now uncertain as the government steps up its efforts to cut greenhouse gas emissions. At the same time, entirely new industries have sprung up.

# #Energiewende – Targets

The overall objective of the Energiewende is to reduce Germany's greenhouse gas emissions and phase out nuclear power, making the economy more environmentally sustainable.

On a national level, Germany aims to cut greenhouse gas emissions by 40 percent by 2020, by 55 percent by 2030 and by up to 95 percent by 2050. The share of renewables in gross final energy consumption is to rise to 60 percent by 2050 (from 14.9 percent in 2015).

Renewables are to cover at least 80 percent of the country's gross power consumption by the middle of the century (**31.6 percent in 2015**).

The expert opinion accompanying the latest **Energiewende Monitoring Report** by the federal economy ministry in December 2016 warned that the country would probably miss its 2020 emission targets and other crucial Energiewende goals, threatening the entire project's credibility. The economy ministry's 2014 **Climate Action Programme** detailing additional measures and CO<sub>2</sub> saving potential is **likely to be less effective than predicted**.

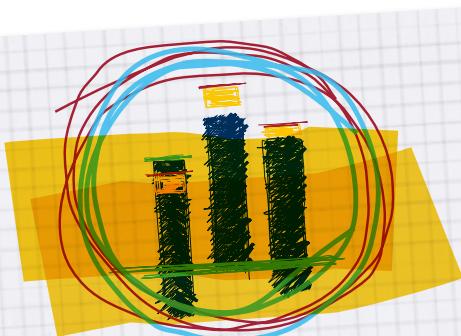

In November 2016, Germany's government agreed on a basic framework for largely decarbonising its economy by mid-century – the **Climate Action**

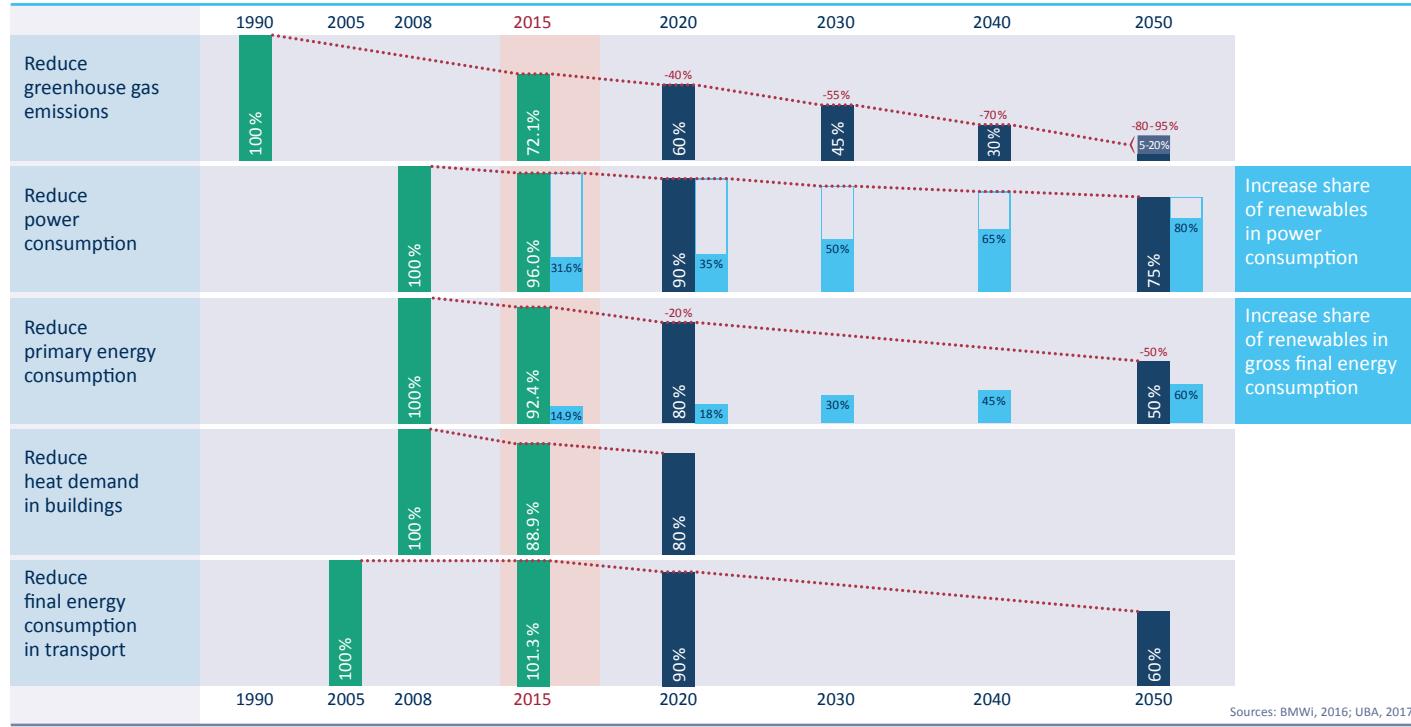

| Greenhouse gas emission reductions |                                     |                                     |

Source: Climate Action Plan 2050, BMUB (2016).

**Plan 2050.** In light of the Paris Climate Agreement, the plan fine-tunes German climate goals. It includes target corridors for reducing greenhouse gas emissions in the individual economic sectors as interim goals for the year 2030. The energy sector will have to cut its emissions roughly in half, compared to today's levels.

## Quantitative targets of the energy transition

# #Energiewende – Key Figures

**45.8 m** Passenger cars registered in Germany (01/2017)

**34,022** Pure electric cars registered = 0.07% (01/2017)

**€3.9 bn** value of E.ON fossil spin-off Uniper at stock market launch in September 2016

**€20 bn** value of RWE renewables spin-off innogy at stock market launch in 2016

**93 %** of Germans believe use and roll-out of renewables is important (2016)

**€22.8 bn** Renewable surcharge paid by power consumers in 2016

**330,000** People employed in the renewables sector (2015)

**20,214** People employed in the lignite industry (09/2016)  

**3.6 %** Renewables' share in gross German power generation in 1990

**29.5 %** Renewables' share in gross power generation in 2016

**12 minutes** and 42 seconds: Average power outage in 2015  
Compare (2014)

Denmark: 12 mins  
France: 50 mins  
UK: 53 mins  
Poland: 192 mins

**20.6 ↗ 29.2 ct/kWh**  
Average household power price 2007 and 2017 – thereof 6.88 ct/kWh renewable surcharge in 2017

**4.48 ↘ 2.86 ct/kWh**  
Average wholesale electricity price in 2007 and 2016

**50 %** of newly built houses 2015 supported through gov programme "Energy-efficient Construction"

**11.1 %** Drop in energy demand for heating 2008–2015

**12.6 %** Renewables' share in primary energy consumption in 2016 (up from 1.3 % in 1990)

**32.3 %** Renewables' share in gross power consumption in 2016 (up from 3.2 % in 1991)

**34.6 %** of natural gas imports came from Russia (2015)

**63 %** of natural gas imports to Germany came from Norway (34.1%) and the Netherlands (28.9%) (2015)

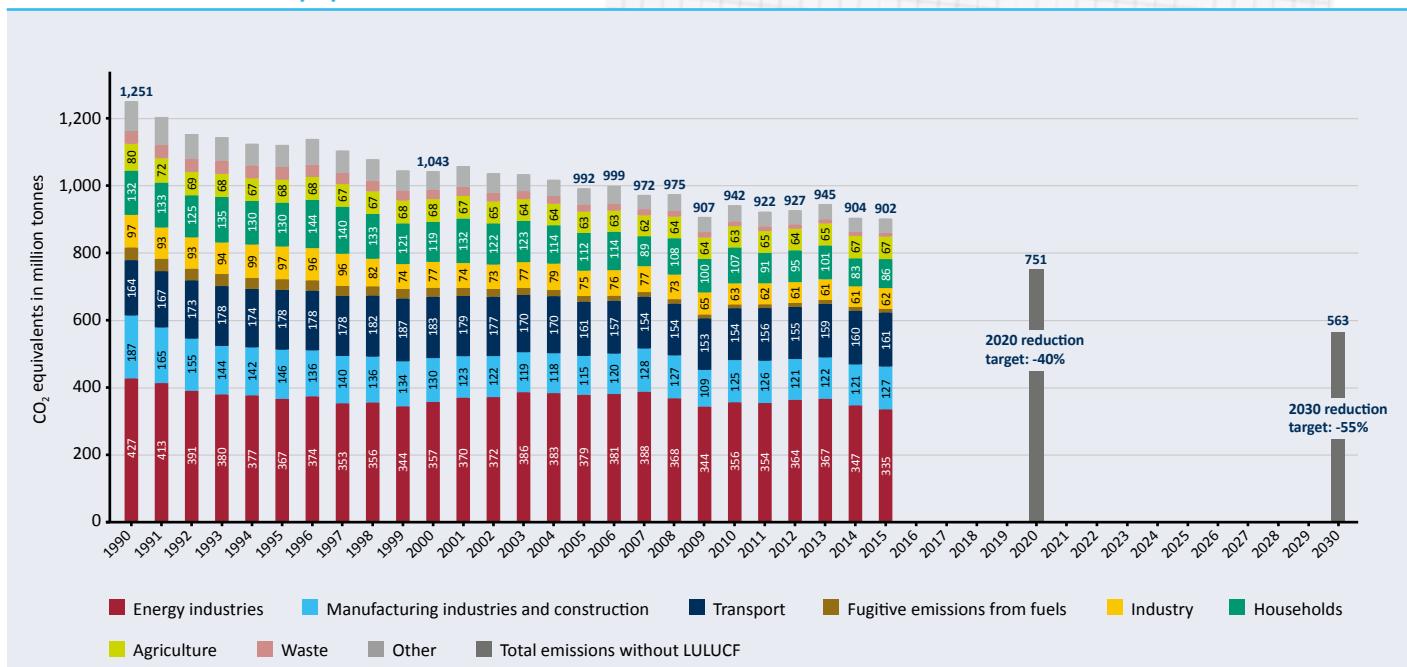

**902 m tonnes** CO<sub>2</sub> equivalents greenhouse gas emissions in 2015

**27.9 %** Fall in greenhouse gas emissions 1990–2015

27.9% greenhouse gas reduction  
since 1990

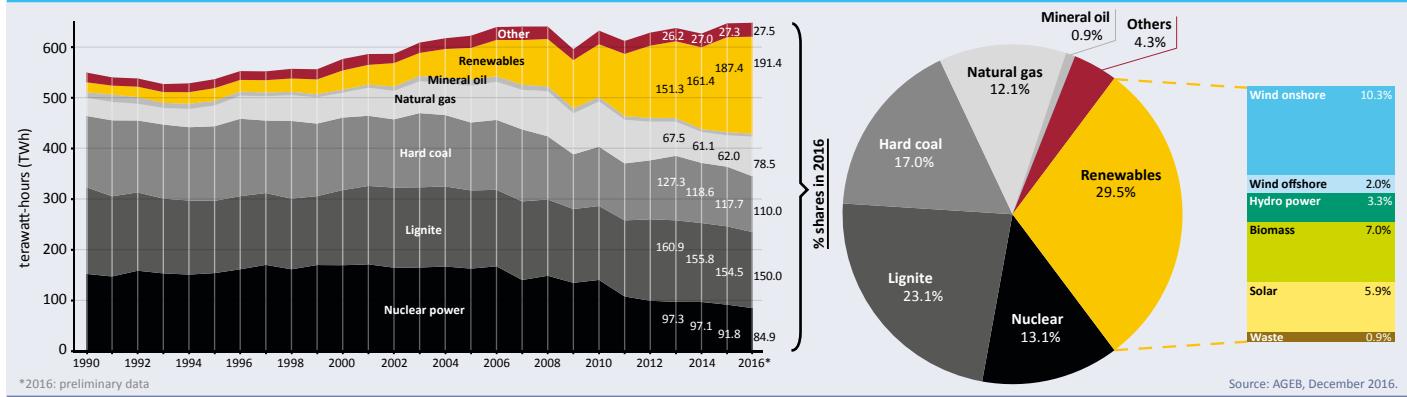

Emission trends for Germany by sector 1990-2015

# #Energiewende – Dates 2017

**17 – 18 March:** Meeting of G20 Finance Ministers and Central Bank Governors, BADEN-BADEN.

**20 – 21 March:** The German government's annual Berlin Energy Transition Dialogue 2017 – "Towards a global Energiewende". Speakers include foreign minister Sigmar Gabriel and IRENA head Adnan Z. Amin, in BERLIN.

**26 March:** State elections in Saarland.

**4 – 5 April:** 14th Hamburg Offshore Wind Conference, in HAMBURG.

**3 – 5 May:** Berlin Energy Days 2017 Conference, in BERLIN.

**7 May:** State elections in Schleswig-Holstein.

**9 – 10 May:** Handelsblatt Digital Energy Industry Conference, in BERLIN.

**14 May:** State elections in North Rhine-Westphalia.

**Late spring/early summer:** Germany's political parties will decide on their election campaign programmes.

**21 – 22 June:** German Association of Energy and Water Industries Congress 2017 – conference on energy markets and energy policy, in BERLIN.

**7 – 8 July:** G20 Summit, in HAMBURG.

**24 September:** Federal elections in Germany, followed by coalition talks.

**18 – 20 October:** 5th World Collaborative Mobility Congress "wocomoco", in BERLIN.

**6 – 17 November:** COP23, in BONN.

# Green pioneer Germany struggles to make climate protection a reality

As the home country of the Energie-wende, Germany is considered a pioneer in the fight against man-made climate change. But despite a spectacular rise in power generation from renewables, the country's track record on cut-

ting greenhouse gas emissions is mixed: It is set to miss its 2020 climate targets. Germany is now aiming at 2030 targets with its Climate Action Plan 2050, a roadmap to a climate-neutral economy by mid-century. But the protracted bat-

# Energiewende – the first four decades

©[nullplus] iStock.

For many observers, the energy transition in Germany began with Chancellor Angela Merkel's decision to phase out nuclear power, following the accident at the Fukushima nuclear plant in Japan. But the societal project started decades before the Merkel

government reinstated plans to exit nuclear power. A long process deeply rooted in German history and society led to policies that triggered a strong increase in renewable energy sources and are now at the heart of a move to a low-carbon economy. The Energiewende – a full-scale

*"The renewable energy act sparked a real grassroots citizens' movement. Germans turned the Energiewende into their own project."*

Nina Scheer, Social Democrats MP

transformation of society and the economy – arose out of enduring grassroots movements, evidence-based discourse, concern about climate change, and key technological advances, as well as hands-on experience garnered along the way in Germany and elsewhere.

#Elections & Politics

# German elections will shape Energiewende for years to come

Germans will elect a new federal government in autumn 2017. Security, economic stability and refugees are likely to dominate election campaigns, but keeping the Energiewende on a steady course and fulfilling Germany's inter-

national climate obligations will still be major tasks for any new administration. Elections in the federal states of North Rhine-Westphalia, Schleswig-Holstein and Saarland will be closely watched for indications of the autumn result.

#Transport

# Car giant Germany struggles to ignite Energiewende in transport

**W**hen it comes to the automobile, Germany flaunts unique gravitas. The German engineer Karl Benz invented the first automobile powered by an internal combustion engine 130 years ago. Today, sales by its carmakers Daimler-Benz, Volkswagen, BMW, Porsche, and Audi top Denmark's annual GDP. But so far, Germany has

made little headway in linking up its transport prowess to another prominent industry showcase – the transition to renewable energy. It's clear that extending the Energiewende to transport will be crucial in the country's quest for a low-carbon economy, but there is no consensus on how this should be done. Carmakers have lobbied hard – and with

©[Petair] Fotolia.

*"Decarbonisation isn't happening anywhere in the sector. Measures are expensive and intervene with our daily life. Thus, it just hasn't been pushed by either politicians or industry."*

*Peter Kasten,  
Institute for Applied Ecology*

some success – against stricter emissions limits, and they risk falling behind the global competition on battery technologies. Consumers are also slow on the uptake of electric vehicles, making it unlikely the government will reach its target of putting 1 million electric vehicles on German roads by 2020.

#Business & Jobs

# Jobs won, jobs lost – how the Energiewende is transforming the labour market

Germany's transition to a low-carbon, nuclear-free economy shakes up the country's labour market. The Energiewende has created hundreds of thousands of jobs – from solar-panel cleaners to housing-insulation specialists and wind turbine engineers. Countless new business

models have emerged, many beyond the renewables industry. Meanwhile, the conventional energy sector has been bleeding jobs, and many business leaders warn the Energiewende will cost many more jobs in other traditional pillars of Germany's economic success, such as steel or the

Utilities and the energy transition

### Factsheets:

Small, but powerful: Germany's municipal utilities

E.ON shareholders ratify energy giant's split

RWE's plans for new renewable subsidiary

Securing utility payments for the nuclear clean-up

German brown coal operations, state-owned EnBW is redoubling efforts to become greener, and smaller municipal utilities also look for alternative business models.

Despite these drastic steps, the utilities' future role in Germany's

fast-changing energy markets is far from clear. Digitalisation will herald new industry upheavals, and smaller players like Sonnen and Next Kraftwerke enter the fray. Experts say it remains to be seen if the utilities can innovate their way out of the crisis.

#Grid

# Connecting up the Energiewende

**G**ermany has to update its network to cope with decentralised, fluctuating supply as the country shifts to renewables.

Rapidly-growing wind power capacity in the north means a bountiful supply of low-cost electricity. But too much

power can be as big a problem for the stability of the grid as too little. And not everyone is in favour of building new power lines to carry electricity to the country's industrial south. The debate raises key challenges, not only of public acceptance but of how central

The social impact of Germany's energy transition

### Factsheet:

Facts and figures on the social impact of the Energiewende

#Cities

# Energy transition to transform German cities

German cities, counties and municipalities all have their role to play in the Energiewende. With the shift to a decentralised energy system, renewable power is increasingly generated in, and often owned by, local communities. Urban centres are where much of the country's energy is distributed and consumed. And as the energy transition

expands its focus from the power sector to heating, buildings and mobility, population centres will be where crucial changes take place.

Germany will only meet its climate targets if localities implement their own energy transitions – which can also bring economic benefits. They have opportunities to take different paths but must

information processing of “Big Data”, rather than large-scale power plants, is poised to become the yardstick for business success in the sector, enabling a new class of players to conquer the field. But the technology also raises concerns about data privacy, and the risk of cyberattacks.

#International #Energy Union #Security

# Energiewende impacts EU neighbours and shapes foreign policy

Germany's energy transition began as a lonely expedition, but rapidly impacted markets in neighbouring countries. The country had to learn it cannot reach its goals independently and needs to cooperate in areas such as power grids, trade, and research.

Energy is also inseparable from German foreign policy beyond the EU, as the country still relies heavily on imports to feed its energy appetite. Germany's shift to renewables will loosen these ties, with uncertain consequences for international security.

Stiftung Mercator and the European Climate Foundation.

## Newsletter

You can sign up for our daily briefing, which includes a news digest and the latest on CLEW, or for a weekly overview of our articles and a calendar of Energiewende events.

## Ask Clew

Our team in Berlin is available to support journalists in their work. CLEW assists with research, provides background and helps to find experts and politicians to speak with.

[info@cleanenergywire.org](mailto:info@cleanenergywire.org)  
or +49 30 700 1435 212

## Workshops

CLEW offers international journalists study tours and workshops, giving them the opportunity to visit individual projects and speak with Energiewende experts and politicians in Germany.

## News

Stay up to date on energy policy in Germany with CLEW News and the daily News Digest on the website.

## Dossiers

CLEW Dossiers provide in-depth background on the Energiewende and its effects on all parts of society.

## Factsheets

CLEW Factsheets summarise key aspects of the Energiewende and provide an overview of current issues.

## Experts

Get in touch with a specialist: Use CLEW's full list of experts or refine your search for research institutes, environmental groups, government, media and business representatives, or political parties.
